

CitiDirect BE® Login via MobilePASS

You don't have to choose between comfort and safety.
Replace SafeWord Card with our new application.

What is the MobilePASS solution?

MobilePASS enables Users to log in to CitiDirect BE, CitiDirect BE Mobile or CitiDirect BE Tablet by leveraging their smartphones to generate dynamic passcodes, instead of the physical SafeWord cards. The solution is an important part of our continuing effort to bring a best-in-class client experience to digital security. It not only improves the login experience, but also enhances the security of the login process.

Benefits of MobilePASS include:

- Enhanced login experience thanks to using a mobile device that is already carried by Users
- Enhanced security thanks to the additional smartphone protection options (e.g. PIN, pattern lock, fingerprint, etc.)
- New User creation and activation in minutes, no longer requiring mail delivery of a physical token
- Friendly dynamic password generation with all-numeric format

How to launch MobilePASS?

STEP 1

Client submits the configuration form to the Bank:

http://www.citihandlowy.pl/poland/citidirect/polish/pdf/cd_aktywacja_konfiguracja.pdf

STEP 2

Client Administrator assigns entitlements to MobilePASS in CitiDirect BE

STEP 3

User downloads the SafeNet MobilePASS application on their smartphone from the App Store, BlackBerry World, Google Play or Windows Store

STEP 4

User connects application with the CitiDirect BE Login ID using the information delivered in a secure way by the Bank

STEP 5

User can generate dynamic passwords from the MobilePASS app on his smartphone and use them to login to CitiDirect BE from his computer, phone or tablet. MobilePASS generates dynamic passwords without an internet connection.

Enhanced protection

MobilePASS combines the security of proven, powerful, two-stage authentication with the convenience resulting from the ability to generate dynamic passwords on a smartphone. MobilePASS reduces the risk of a password being used by an unauthorized person, and there was such a risk in the case of inadequately protected SafeWord card. Another safeguard is an individually selected PIN required to access a previously configured token within the app. The Users can enhance security even further by introducing additional access protection to their smartphones, eg. PIN, password, pattern lock, or fingerprint.

You can find more details about MobilePASS on our website www.citidirect.pl and at the following contact numbers: 801 343 978 and +48 22 690 15 21.
